IBM Standard Modular System Component Circuits

Form 223-6875-1 (2/60:2M-AG-240)
February, 1960

PDF document of scanned images
Original scanned TIFF files.
Hand edited TIFF files

Scanned Jan 20, 2006
Randall Neff

Plustek OpticBook 3600 BookScanner with
supplied software.

Manual was 8.5 by 11 inches, bound.

Scanned 400 dpi, 1 bit b/w TIFF with Group 4 lossless
compression

“gray” files scanned at 400 dpi, 8 bit TIFF

A 'script-fu' module was written for GIMP to add the white
space gutter to both the odd and even pages. This
increased the x-width from 3109 to 3400 pixels and
centered the text block in the page.

Even pages were hand edited to add the truncated card ID
name (lost in the gutter on scanning).

All pages were cleaned up around the edges.
